New 400-Bed Hospital
Jeddah, Saudi Arabia

This new 400-bed hospital was designed to promote a new image in order to accommodate the Kingdom of Saudi Arabia’s changing culture and serve as an “iconic structure” on this Jeddah campus. The 14-story facility, which covers 70,000 square meters of space and overlooks the Red Sea, will provide staff and visitors traveling to Mecca with a world-class hospital that focuses on providing a strong healing environment for cancer patients. The hospital will also be available for the millions of visitors traveling during the holiday season, and will begin to change the way that healthcare is delivered in Saudi Arabia.
