New 300-Bed National Hospital
Papua New Guinea

The proposed facility will be a model state-of-the-art non-profit 300-bed medical center campus constructed on a significant parcel of property located near a major city with access to and by the population, to roads, the international airport, fresh water, and electric power. The proposed hospital complex will include the medical center hospital, housing, education facilities, infrastructure support facilities and allow for future expansion.

The new hospital facility will be the Center of Excellence for medical care; providing the highest quality care to all the patients it serves. The new facility will also act as the national referral center for complex cases and those requiring a higher level of care and will act as the national center of medical education and continuing educational services; allowing for the advancement of all healthcare providers. The new facility will be a model by which all future medical treatment facility construction will be modeled.
