The project opened in the Spring of 2012 and has been receiving rave reviews from hospital administrators, staff, patients, and families for the highly effective space planning, efficient operations, and outstanding patient care environment.

As part of its new $450 million dollar replacement hospital campus, the University Medical Center of Princeton selected Fletcher Thompson to work with developers, Trammell Crow Company, to design all of the hospital’s ambulatory care programs.

This new 150,000 square foot Medical Office Building and Ambulatory Care Center is connected to the main hospital. Hospital-based support, along with ambulatory services such as Outpatient Surgery and Imaging, are tightly integrated with private physician practice space. Fletcher Thompson was responsible for designing all ambulatory care programs, which include:

- Ambulatory Surgery Center
- Comprehensive Imaging Suite
- Occupational Medicine
- Sleep Laboratory
- Specimen Laboratory
- Women’s Health Center
- Multi-Specialty Practice Suite
- Department of Surgery & Medicine Offices
